WORK EXPERIENCE

Assistant Professor | University of Arizona, ECE *Aug 2025 - Present*

- Lead *Secure Autonomous Systems* (SAS) research group working on computer security and systems. We advance the security, resilience, and trustworthiness of emerging autonomous systems (e.g., self-driving vehicles, drones, and robots) through cross-layer design and analysis.

Research Assistant/Research Fellow | University of Michigan, EECS *May 2020 - Aug 2025*

Supervisor: Prof. Z. Morley Mao

- Research on software/system for cyber-physical system safety — *AVChecker*, the first traffic rule compliance checker on autonomous driving software; *SmtConf*, safety vetting of industrial control system configuration.
- Research on adversarial machine learning on cyber-physical systems — Adversarial attack and mitigation on trajectory prediction on autonomous driving; Analyzed data fabrication vulnerability on collaborative perception.
- Research on robustness of vehicular network — *RAO*, collaborative perception with asynchronous sensors.
- Research on robust perception algorithms of autonomous driving, and large language model security/efficiency.

Software Engineer Intern | Google *May 2023 - July 2023*

- Designed and implemented formal verification solutions to enhance the security properties of an embedded system kernel (based on open-sourced Tock OS), involving modular model checking and theorem proving.

Software Engineer Intern | Google *May 2022 - July 2022*

- Designed and implemented static analysis checks based on Android Lint for Google's Android tests, which was deployed to assist Google developers to write high-quality unit tests.
